EasylO™

EasyIO is the right solution for connecting a small number of serial devices to Windows NT, UNIX and NetWare servers simply and cost-effectively.

Supporting data rates of up to 460 Kbps per port, EasyIO gives you all the performance you will ever need. Available as PCI and ISA bus adapters, EasyIO delivers effective server-based serial access for today's Pentium-class servers.

Small Business Access

Combine EasylO with integrated Windows NT small business solutions, such as the BackOffice Small Business Server suite, to achieve a compact dial-up networking, fax, Internet and Point-of-Sale access solution. Financial, medical, retail and a myriad of other businesses can benefit from EasylO's high performance and low cost of ownership. With on-board data buffering and flow control, EasylO comfortably handles the demands of any dial-up modem or ISDN T/A, reliably.

Point-of-Sale, Data Collection and Industrial Control

Customers with replicated installations often need a tailored solution. Lantronix offers a range of standard and factory-installed options that let you match EasylO to your specific application needs. A variety of connector types and optional DC power for bar code readers, receipt printers, and other serial devices make EasylO well suited to POS applications. A choice of electrical interfaces and surge suppression make EasylO the robust solution for industrial control and data collection applications, such as robot control, scanners, card swipes, wagering and data logging.

Multi-User Workgroup Access

EasylO provides access to Citrix WinFrame and Microsoft Windowsbased Terminal Server extensions from a variety of thin clients, and supports UNIX application access from terminals and PCs.

Microsoft, Citrix and Novell certify EasyIO for operation in Windows NT, Windows 95/98, WinFrame and NetWare environments. EasyIO also supports all popular UNIX platforms.

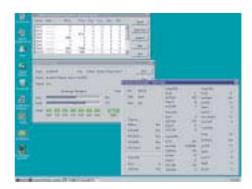

EasylO means:

- Real value for the small businesses and replicated sites, without any feature or performance tradeoff
- Smooth Integration with EasyConnection, making it easy to support and upgrade
- Versatility that lets you apply one solution to a multitude of situations

Easy to Configure, Manage and Use

EasylO's low cost of ownership is evident in its simple setup and maintenance-free operation. The EasyadmTM installation wizards make configuration a point-and-click exercise, and self-diagnostic software keeps your installation working with little ongoing maintenance.

- Self-supporting features, install wizards and low component count provide years of service-free operation
- Tailored connectivity to suit any retail or industrial application

Features

Factory options

Operating Systems

Tools

Ports per adapter 4 or 8 (up to 8 adapters/system)

Bus architectures PCI, ISA; half size card

Connector types RJ45 (4 or 8 port), DB25 socket (8 port standard, 4 port optional)

External octacable (DB25) or module (RJ45) for 8 port model Surge protection, DC power on DB pins, DB9 plugs, RS-422-A Easyadm (UNIX, Windows NT), optional Custom Driver Kit Windows NT and Windows 95/98; WinFrame; SCO OS5, UnixWare and Xenix; Linux; BSDI; SunSoft Solaris x86 and

Interactive; UNIX SVR 4.x; NetWare; OS/2; DOS

Technical Specifications

Host addressing 8 bytes I/O space

Host interrupt 1 per card (ISA), shared interrupts (PCI)
Serial interface RS-232 (V.24), RS-422-A (V.11, factory option)

Signals TXD, RXD, RTS, CTS, DTR, DCD, SG, (DTE configuration)

Serial data rate/port Up to 460.8 Kbps

Certification FCC Class A, EN55022/EN50082-1, CE, C-Tick

Environment Ambient temp 10-50° C, rel. humidity 5-90% non-condensing

Power 4 port: +5V @ 160mA, ±12V @ 60mA

8 port: +5V @ 135mA, +12V @ 115mA, -12V @ 125mA (ISA),

+5V @ 180mA, +12V @ 115mA, -12V @ 125mA (PCI)
